# Create a user directory

Given a file of user data, create a directory of users.

Using the attached `data.js` file, build an Express app that works as a directory of users in the file. You should use `require` to get the data from the `data.js` file.

The amount of info each user has varies. Users with no job or company data are currently looking for work.

[Forked JavaScript file.](#)

Your directory should look like the following images. Your CSS should be in a file in the `/public/` directory and be served through Express.

**Index**

**Hamlen Juza**

Engineer IV, Stark, Feil and Bode

**Dee Odda**

Available for hire

**Carleen Timmes**

Data Coordinator, West, O'Kon and Beahan
